

# The IUCN Green List

*Results from Day 1  
Discussion for Day 2*

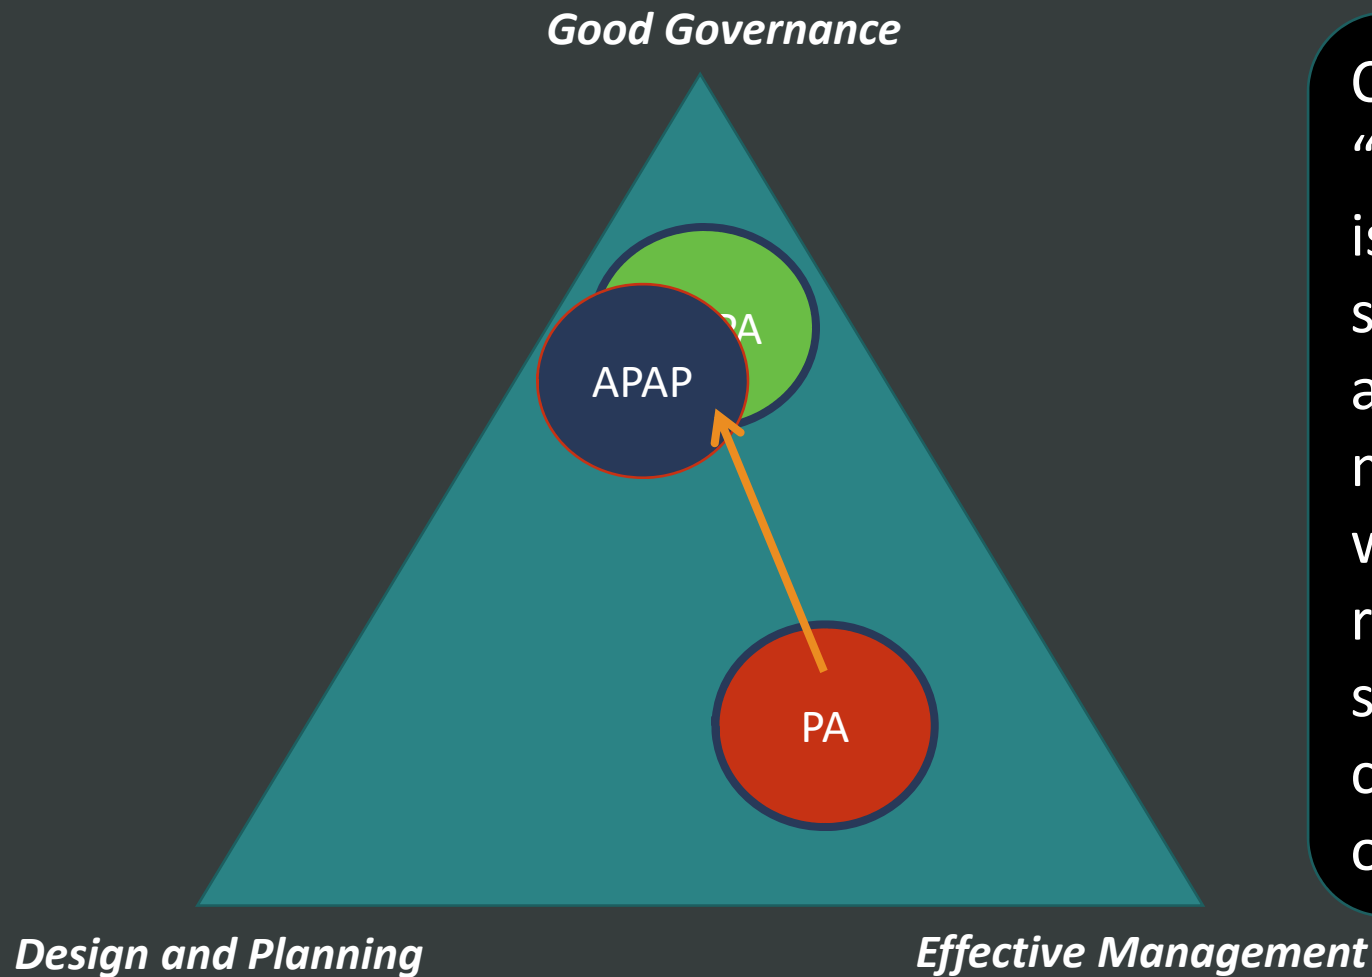

4<sup>TH</sup> APAP TECHNICAL WORKSHOP  
PYEONGCHANG  
JUNE 2018

# *APAP participant survey: the most important ingredient for successful conservation outcomes in PAs*

**CONCLUSION:**  
“Governance is the key to sound design and effective management, which in turn result in successful conservation outcomes”

*Combined RESULTS: the most important ingredient for successful conservation results in PAs*

**CONCLUSION:**  
"Governance is the key to sound design and effective management, which in turn result in successful conservation outcomes"

# APAP Technical recommendations for the IUCN Green List in Asian Protected Areas I

- APAP should implement the IUCN Green List in each member country that is willing to participate
- IUCN should take a leading role in sharing the process and benefits with APAP partner countries
- IUCN should seek to integrate CA/TS (tigers) and Green List (other values) into one governance and evaluation system (all successful CA/TS sites would also demonstrate compliance with the IUCN Green List Standard)
- Connect and share lessons and approaches to implementing and adapting the Green List Standard
- Organise national workshop to bring together all stakeholders and provide capacity on how to achieve the criteria at national level, and between countries

# APAP Technical recommendations for the IUCN Green List in Asian Protected Areas II

- Review ways to simplify the IUCN Green List process in APAP
- Select appropriate pilot sites for the GL process
- Provide technical and financial support to countries to implement
- Exchange and study tours between sites and countries
- Promote the brand to increase visibility and benefits to sites
- Use GL to help promote transboundary conservation
- Guidelines and reporting should be user-friendly

## Group work – Day 2

# PA Management Effectiveness

- Based on the experiences from all countries, what seem to be the common benefits from using protected area management effectiveness tools and methodologies?
- What are the common challenges?
- What could APAP do in the future to help countries overcome the challenges and use PAME tools and methodologies more effectively?
- Please give your top one **recommendation for PAME** and one **priority recommendation for the IUCN Green List** to take from this technical workshop to the next APAP meeting
